

Unit 5: Introduction to Computing and Data Analysis

Prologue

Before we can engage in a meaningful discussion about computing and data analysis, we are going to need some data. Over the next several days, you are going to be engaged in some activities that generate some data for us to compile, compute, and analyze. This first data collection involves you, as an individual, and your relative ability to perceive color variations.

Activity

Navigate to each of these websites. There you will find a number of visual acuity tests. After each test, record your results and the demographic data we decide as provided.
